U.S. Appln. No. 09/866,245 Reply to Final Office Action dated July 21, 2010

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in

the application. An identifier indicating the status of each claim is provided.

Listing of Claims:

1. (Currently Amended) An electronic-program-guide retrieval method

comprising the steps of:

receiving an input retrieval keyword:

accessing a dictionary database based on an input retrieval keyword;

extracting at least one additional keyword from a dictionary database as a function

of the input retrieval keyword,

wherein, when the input retrieval keyword is received in the receiving step, the at

least one additional keyword is extracted from the dictionary database as a function of the input

retrieval keyword in the extracting step; and

pre-designating one particular database from among a plurality of databases,

including an electronic-program-guide database, a movie information database, and a drama

information database,

wherein each of the plurality of databases are provided in separate data servers for

distributed arrangements at different locations;

selecting a route to the one particular database via a routing server comprising: a

storage unit for storing information on a path to each of the plurality of databases; and an access

unit for accessing each of the plurality of databases;

U.S. Appln. No. 09/866,245 Reply to Final Office Action dated July 21, 2010

searching electronic-program-guide data from the particular database that is pre-

designated as a function of the input retrieval keyword and the at least one extracted additional

keyword,

wherein, when the input retrieval keyword is input, relevant keywords, extracted

by the dictionary database are sent to the routing server, and

wherein the routing server accesses one of the databases in a data server storing

the particular database, storing desired data by selecting a route to the data server, whereby the

desired data is obtained.

2-5. (Canceled)

6. (Previously Presented) An electronic-program-guide retrieval method

according to claim 1, wherein the input retrieval keyword and the at least one extracted

additional keyword are interrelated to each other.

7. (Previously Presented) An electronic-program-guide retrieval method

according to claim 1, wherein when part of a word to be used as the input retrieval keyword is

input, said word to be used as the input retrieval keyword and the at least one extracted

additional keyword are extracted from a retrieval-keyword database storing previously input

keywords in a predetermined order.

8. (Canceled)

9. (Currently Amended) An electronic-program-guide retrieval method

according to claim 1, wherein when a particular genre is relevant to cooking, a different genre is

relevant to cooks.

10. (Currently Amended) An electronic-program-guide retrieval method

according to claim 1, wherein when a particular genre is relevant to place names, a different

genre is relevant to names of persons.

11. (Currently Amended) An electronic-program-guide retrieval system

comprising:

a data server including an electronic-program-guide database storing program

information of an electronic program guide;

a dictionary database for storing a plurality of retrieval keywords and a plurality

of additional keywords relevant to said retrieval keywords; and

a client module comprising:

input means for inputting said retrieval keywords;

access means for accessing said dictionary database as a function of said

retrieval keywords and the plurality of additional keywords;

U.S. Applin, No. 09/866,245 Reply to Final Office Action dated July 21, 2010

when receiving the input retrieval keyword, extracting means for extracting at

least one additional keyword from the dictionary database as a function of the input retrieval

keyword,

wherein, when the input retrieval keyword is input by the input means, the at least

one additional keyword is extracted from the dictionary database as a function of the input

retrieval keyword by the extracting means;

designating means for pre-designating one particular database from among a

plurality of databases, including an electronic-program-guide database, a movie information

database, and a drama information database,

wherein each of the plurality of databases are provided in separate data servers for

distributed arrangements at different locations;

selecting means for selecting a route to the particular database via a routing server

comprising: a storage unit for storing information on a path to each of the plurality of databases;

and an access unit for accessing each of the plurality of databases;

searching means for searching electronic-program-guide data from the one

particular database that is pre-designated as a function of the input retrieval keyword and the at

least one extracted additional keyword,

wherein, when the input retrieval keyword is input, relevant keywords, extracted

by the dictionary database are sent to the routing server, and

wherein the routing server accesses one of the databases in a data server storing

the particular database, storing desired data by selecting a route to the data server, whereby the

desired data is obtained.

212-588-0800 Customer Number 20999 12. (Previously Presented) An electronic-program-guide retrieval system

according to claim 11, wherein said dictionary database is provided at the client side.

13. (Previously Presented) An electronic-program-guide retrieval system

according to claim 11, wherein said dictionary database is provided at the data server side.

14. (Previously Presented) An electronic-program-guide retrieval system

according to claim 11, wherein said client downloads and stores the program information.

15. (Previously Presented) An electronic-program-guide retrieval system

according to claim 11, wherein said client accesses a necessary part of said data server via a

routing server storing information on routes to the parts of said data server.

16-17. (Cancelled)

18. (Previously Presented) An electronic-program-guide retrieval system

according to claim 11, wherein previously input keywords are stored in a retrieval-keyword

database, and the stored keywords are arranged in order of frequency of use.

19-20. (Cancelled)

U.S. Appln. No. 09/866,245 Reply to Final Office Action dated July 21, 2010

21. (Previously Presented) An electronic-program-guide retrieval system

according to claim 11, wherein the program information includes data relevant to place names.

22. (Cancelled)

23. (Currently Amended) An electronic-program-guide retrieval system

comprising:

a data server including a plurality of databases, one of which is a television

electronic-program-guide database for storing program information of an electronic program

guide containing only keywords determined by an EPG provider as retrieval keywords;

a client having a certain data storage capacity comprising input means for

inputting a retrieval keyword for retrieving the program information;

a dictionary database provided at the data server side and the client side for

storing retrieval keywords and relevant keywords relevant to said retrieval keywords,

a routing server having an access unit for accessing selectively said database and

route information,

wherein when retrieval keyword is input, and relevant-keyword information

relevant to the retrieval keyword input by said client is extracted from said dictionary database

provided at the client side, said client sends the relevant-keyword to said routing server and the

routing server accesses one of a plurality of databases, including an electronic-program-guide

database, a movie information database, and a drama information database via said routing server storing information on routes to the parts of said data server, and

wherein said routing server accesses the database by:

pre-designating one particular database from among a plurality of databases, including an electronic-program-guide database, a movie information database, and a drama information database.

wherein each of the plurality of databases are provided in separate data servers for distributed arrangements at different locations;

selecting a route to the particular database that is pre-selected via a routing server comprising: a storage unit for storing information on a path to each of the plurality of databases; and an access unit for accessing each of the plurality of databases;

searching electronic-program-guide data from the one particular database that is pre-designated as a function of the input retrieval keyword and the at least one extracted additional keyword.

wherein, when the input retrieval keyword is input, relevant keywords, extracted by the dictionary database are sent to the routing server, and

wherein the routing server accesses one of the databases in a data server storing the particular database, storing desired data by selecting a route to the data server, whereby the desired data is obtained.
